INLAYER MINERAL SURFACES

A NEW BREAKTHROUGH IN SURFACES

We know about surfaces.
Because we design them from the inside out.

We don't settle.
That's how we move forward.

We ask ourselves our own questions.
Because the unknown is where design begins.

Nature is our source.
Limitless. Unique. Layered.

What if a surface were a portrait of nature?
What if it were made of layers?
What if we reimagined what it's made of?
What if it performed beyond normal?

We've found the answer.

ÈCLOS
A new surface landscape.

A NEW LAYER OF MATTER & DESIGN

WITH INLAYERED TECHNOLOGY®

ĒCLOS is the next generation of mineral surfaces, featuring a layered full-body integrated design and superior heat resistance.

Thanks to its INLAYR™ technology, its production combines minerals and recycled materials with a low-crystalline silica composition, through an advanced process of robotic engineering and integrated decorative techniques. Eclectic Veins is our first collection with zero crystalline silica in its composition.

The result is a high-performance material with realistic aesthetics, and a natural touch & feel for indoor applications.

ĒCLOS FEATURES

INLAYR FULL-BODY DESIGN TECHNOLOGY

Unlike superficial patterns, ĒCLOS's multi-dimensional approach is achieved through combining a tailored raw material composition with robotics and decoration techniques. The result is a layered 3D integration that adds depth and consistency.

REALISTIC AESTHETICS. A NATURAL TOUCH & FEEL

ĒCLOS has a natural touch and feel. A tactile experience full of depth that feels authentic.

ENGINEERED TO PERFORM

Its advanced composition offers high resistance to impact from dropped cookware, heavy utensils, and daily collisions that occur in high-traffic workspaces.

SUPERIOR HEAT RESISTANCE

We've designed ĒCLOS to withstand temperatures up to 220 °C, including direct contact with cookware immediately after use. Hot cookware can be placed directly onto the surface, straight from the stove or oven, without concern for marks or damage.

A ZERO SILICA PRODUCT & A RECYCLED CORE

Eclectic Veins is our first collection with zero crystalline silica in its composition. Made up to 88% recycled materials and selected minerals.

LAYERS OF DESIGN

Every ĒCLOS surface tells a story, shaped by design, depth, and emotion. With ĒCLOS, beauty is not only seen on the surface, but felt through every layer. Crafted with the INLAYR technology, it brings portraits of nature into your kitchen and interior decor.

LAYERED 3D FULL- BODY INTEGRATION

Unlike superficial patterns, ĒCLOS's multi-dimensional approach is achieved through combining a tailored raw material composition with decoration techniques.

The result is a layered 3D integration that adds depth and consistency.

TECHNOLOGY BECOMES ARTISTIC EXPRESSION

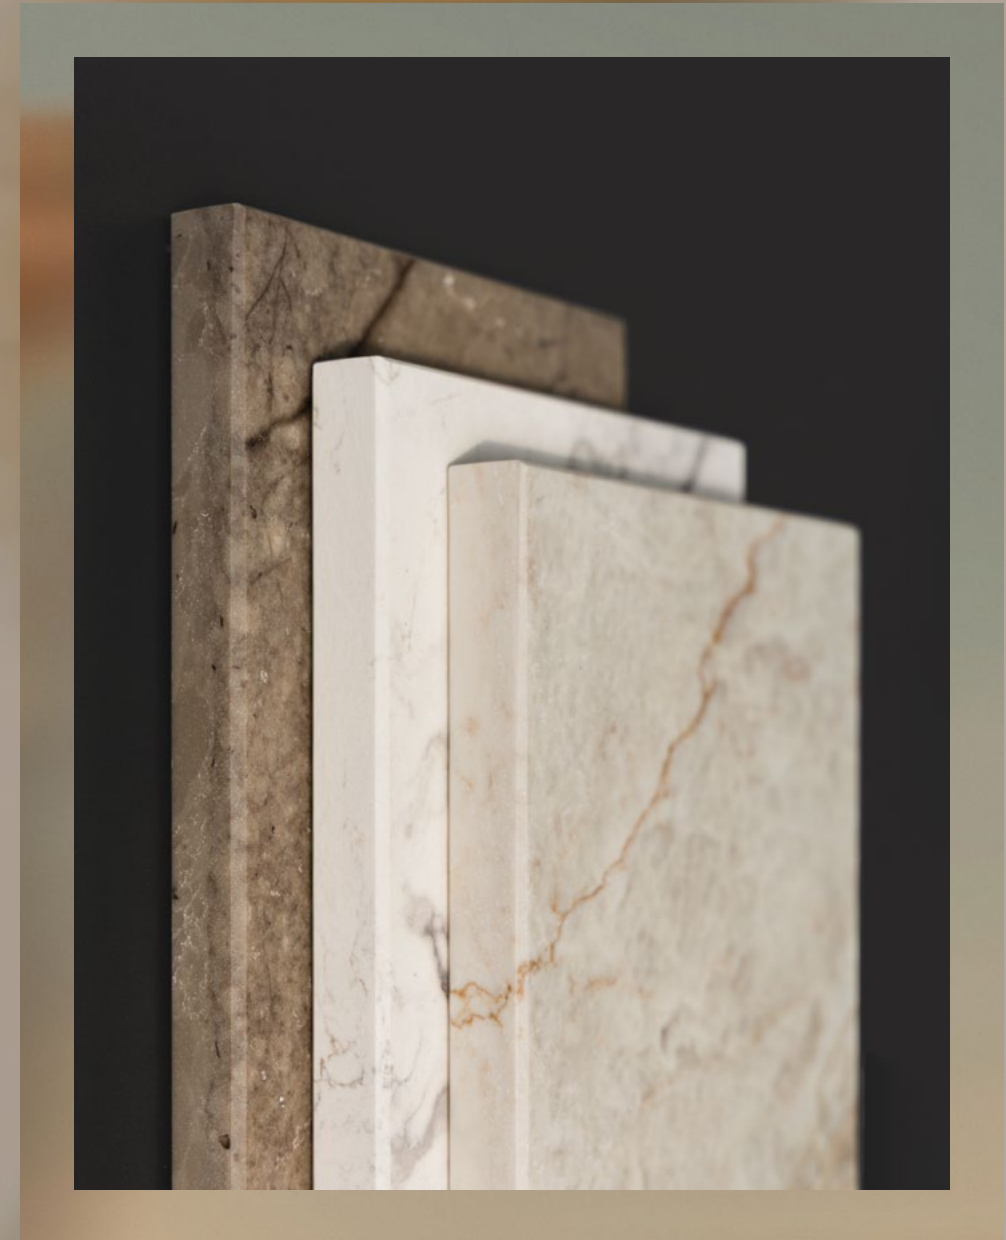

At the heart of ĒCLOS lies a new generation of design technology, enabling new ways of expression.

Using advanced INLAYR® techniques and integrated processes, each surface becomes a composition of color, texture, and light, built not in one step, but in layers, for a richer, detailed and more authentic appearance.

ECLECTIC VEINS. ECLECTIC BEAUTY

The firsts ĒCLOS collection conveys colors withdrawn from nature that pulse with eclectic energy and depth, ensuring every space feels alive, dynamic and unique.

ĒCLOS reveals color palettes, eclectic vein patterns, and layered textures that feel both natural and sophisticated, bringing portraits of nature into your kitchen or any space where beauty meets function.

A CONTEMPORARY DESIGN BRAND

ĒCLOS is a contemporary brand that combines design, functionality, and innovation in surfaces.

It's a brand for those who value creativity and thoughtful design.

We focus on delivering original and no-ordinary surfaces that integrate art, design, and engineering, to create spaces with distinctive character.

A new generation of surfaces, designed for today's spaces and tomorrow's people.

This is ĒCLOS. A surface that creates a new design landscape that merges layers from nature with technology.

ECLECTIC VEINS

NEW COLOR PALETTES

Introducing a new dimension of surfacing design, where robotic precision & layered decoration techniques meets art & engineering.

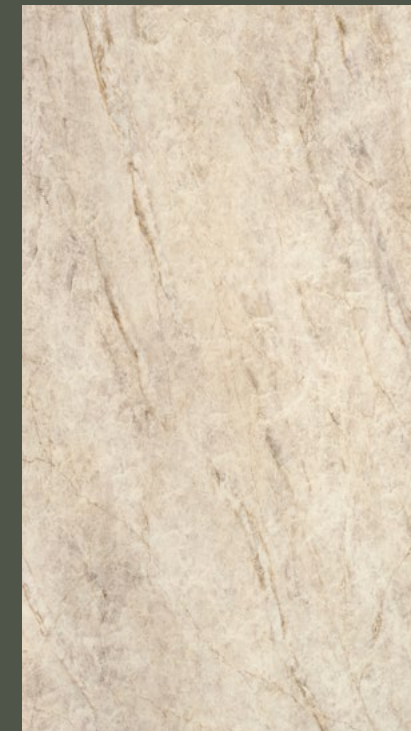

INLAYR® is the new design technology that powers ĒCLOS.

With INLAYR® design technology, ĒCLOS achieves breathtaking shades & gradient effects that seamlessly blend into a refined composition, delivering a stunning interplay of texture and color. INLAYR® generates delicate and intricate detailed veins that make ĒCLOS surfaces gain depth and sophistication.

With an advanced automation process and special raw materials, INLAYR® design technology enables genuine 3D full-body integration, bringing textures and patterns to life, with depth, and unique personality.
